

Letter of Recommendation

21-04-2025

To whom it may concern:

Coimbatore

I am writing to strongly support Ashwin Balaji's application for your Master's program. As the Head of Department of Re, iQube and Garage (RiG) at Kumaraguru College of Technology, I have over a decade of experience leading research and development initiatives. To expand and apply his theoretical knowledge with practical experience he joined "**iQube-The Innovation forum**" at our college, during his fifth semester and hence I had the opportunity to observe him at close quarters. I have no reservations in admitting that he is a well-educated and most dedicated person who learnt here.

Through his involvement in various projects under iQube, he developed a strong foundation in Embedded systems, IoT, and Networking. Some key projects he worked on include the Hydroponics System, Home Automation, CNC Machine State Monitoring Device, and i5 Taan. For instance, the CNC machine state monitoring device helped the company gain valuable insights and reduced the downtime of the machine by 27%—which clearly states Ashwin's problem-solving capabilities.

His ability to work in a team and take initiative was evident during Toycathon-2025, an event organized by the Government of India, where his team reached the finals and earned special recognition for their prototype, "**i-Shiksha**"—a handheld toy for children less than 10 years old to improve their math, motor and memory skills. I mentored the team, where I witnessed him demonstrate immense leadership and technical expertise. One of his major achievements was his contribution to the "**i-Practace**" product, a tennis bowling machine. His team secured Rs. 9.48L in funding from DST for this project. His role in firmware development and prototype manufacturing was vital, which ensured that the project was completed within the given timeline. He was honored with the "**Plunge Award**" and "**Best Project Award**" by the college—a well-deserved recognition for his hard work.

He was an individual learner as well as a mentor to his juniors, guiding them with their projects and encouraging a culture of knowledge sharing. He always has keen interest in knowing about the minute details of his work, so he tries to enrich his knowledge by asking me good questions. I strongly believe that the work done by him in Embedded systems & IoT has given him a good base to continue his exploration in the fields related. He contributed an immense part of practical work pushing the project studies forward. His communication and teamwork contributed to our productivity.

In summary, I believe that Mr. Ashwin Balaji is well-equipped to become a successful candidate to do a Master's program and I assure that he will be a good researcher in his field of interest.

Regards

Nirosh kumar Hariputhiran
